

Celebrate the vital
role of pollinators
in our ecosystems
and in agriculture.

POLLINATOR WEEK *June 16-22*

Protecting pollinators
means protecting
biodiversity, food
security, and
farmworker
livelihoods

Pollinators are being
threatened by habitat
loss, pesticide
exposure and climate
change

Over 1/3 of the
food we eat relies
on animal
pollination.

To protect pollinators,
plant native wildflowers
or pollinator gardens,
reduce pesticide use
and advocate for
conservation programs

Spread the word and use the hashtags
